EXPERIENCE

General Assembly, New York, NY

April 2015 – July 2015

Web Development Immersive | Web Developer

Timber – *An interactive story about climate change*

- Utilized parallax scrolling to achieve a seamless interface
- Displayed statistics on global and national CO2 emissions with Chart.js
- Gathered data on annual temperature and precipitation rates by querying the World Bank API and the NOAA API

AdmiTron5000 – *An app that tracks applicants through the admissions process*

- Achieved user accounts and sessions using Bcrypt
- Utilized a PostgreSQL database alongside a Ruby on Rails back-end
- Enabled students to create and upload documents for their application
- Designed an interactive homepage using jQuery, HTML5, and CSS

MakeBelieve – *An internal Wikipedia for a marketing company specializing in millennials*

- Housed articles, categories, and user information in a PostgreSQL database
- Allowed users to edit and create articles and categories via dynamic route handling in Sinatra and Ruby
- Designed a clean and functional homepage using jQuery, HTML and CSS
- Rendered text in Markdown by implementing Redcarpet
